

Customer Retention & Churn Analysis

Customer Retention & Churn Dashboard

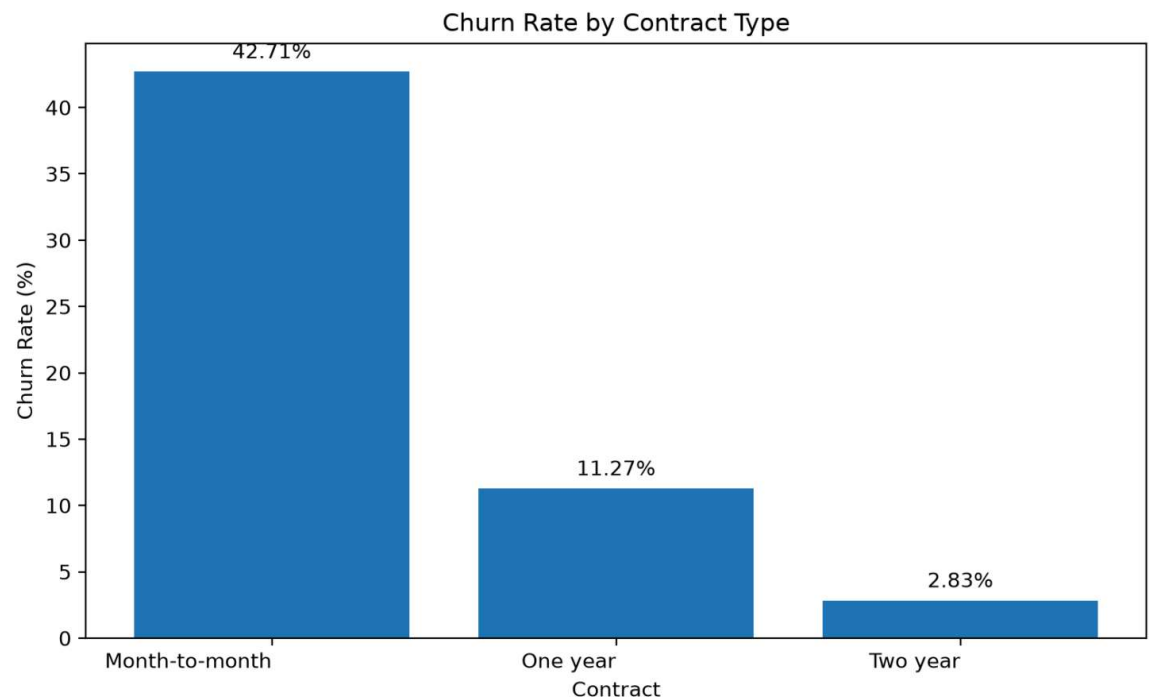

This dashboard analyzes customer churn, contract type, tenure, internet service, payment method, and support services.

Note: The relationships shown in this dashboard are associations in the dataset and should not be interpreted as proof of causation.

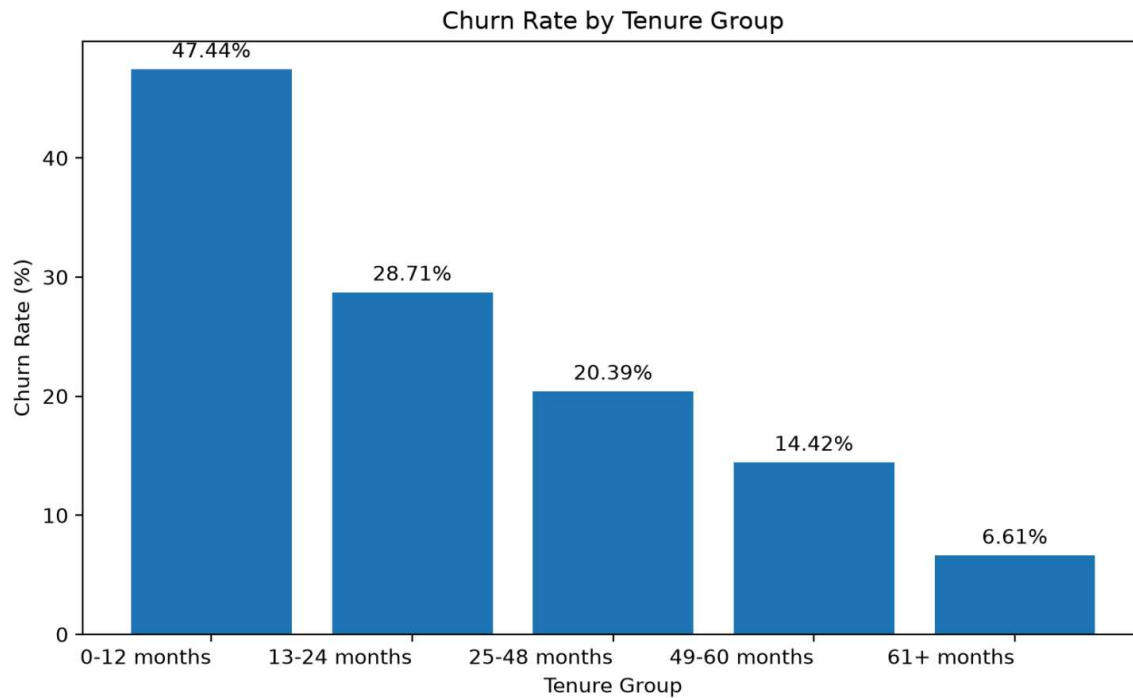

Key Performance Indicators

Total Customers	Churned Customers	Overall Churn Rate	Average Tenure
7,043	1,869	26.54%	32.37 m...

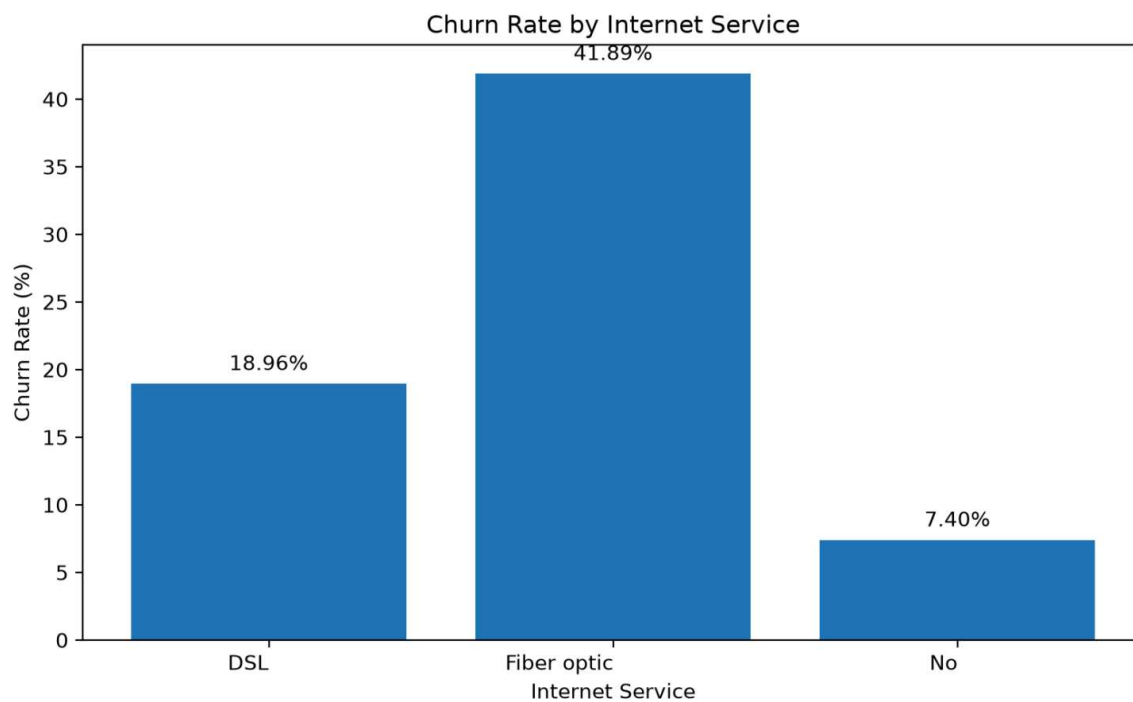

1. Churn Rate by Contract Type

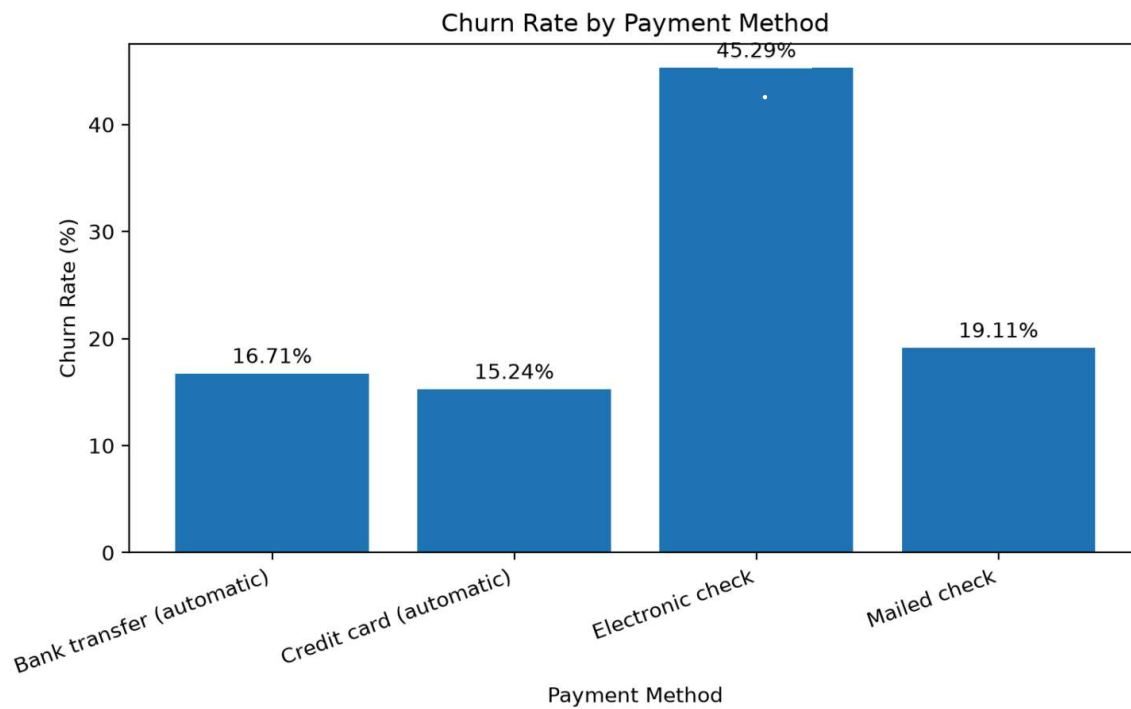

2. Churn Rate by Customer Tenure

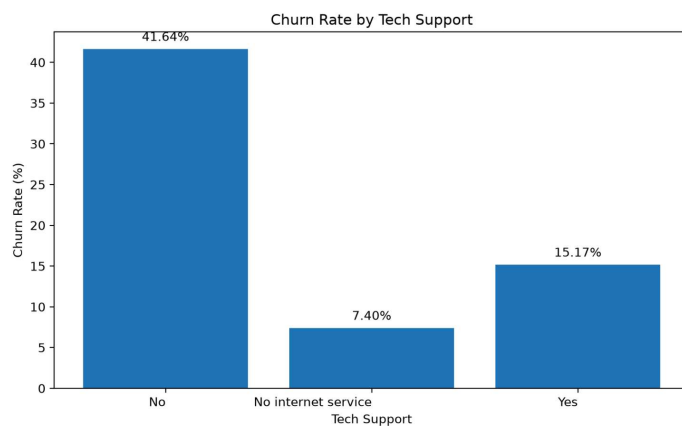

3. Churn Rate by Internet Service

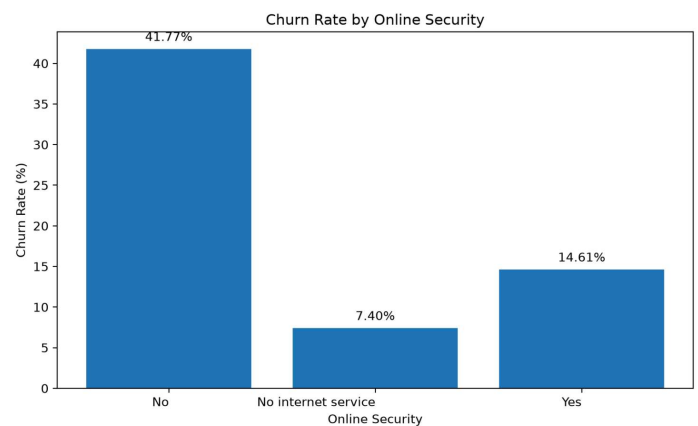

4. Churn Rate by Payment Method

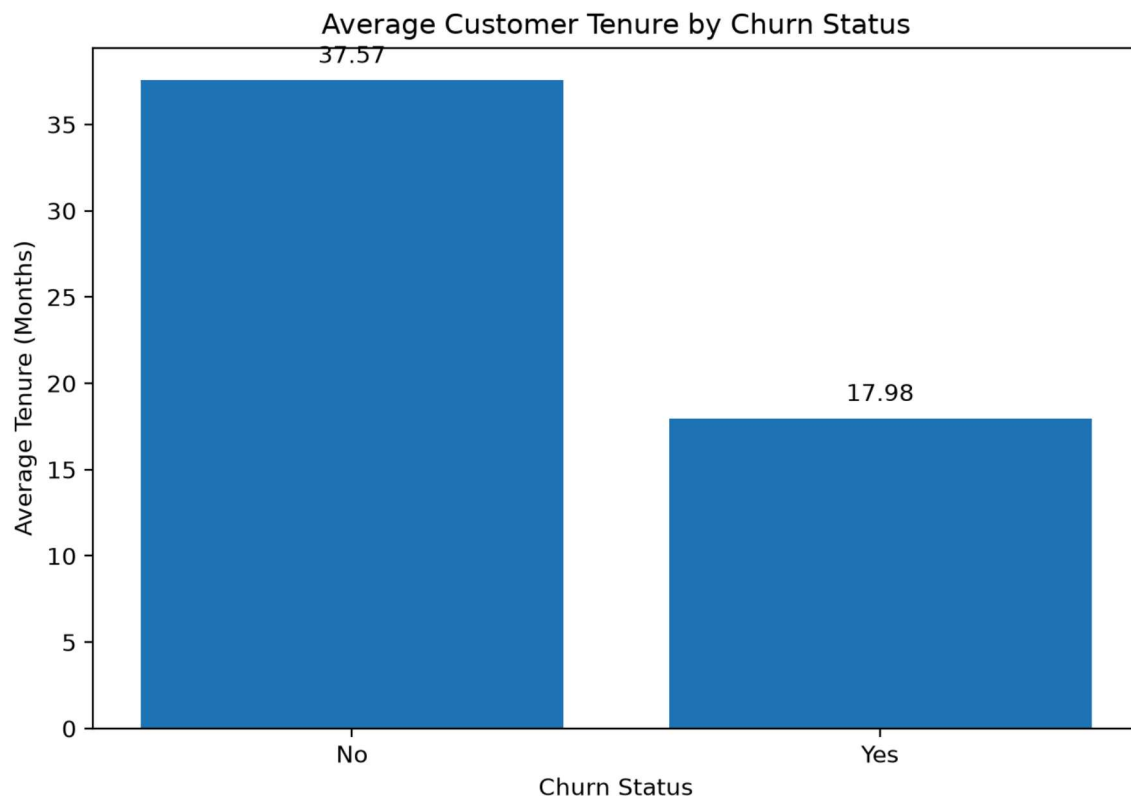

5. Churn Rate by Tech Support

6. Churn Rate by Online Security

7. Average Customer Tenure by Churn Status

8. Customer Lifetime Summary

Churn	Customers	AverageTenure	AverageMonthlyCharges	AverageTotalCharges
No	5174	37.57	61.27	2555.34
Yes	1869	17.98	74.44	1531.8

Key Insights

Overall Churn

- The overall customer churn rate is **26.54%**.
- There are **1,869 churned customers** out of **7,043 customers**.

Customer Tenure

- Customers with shorter tenure show higher observed churn rates.
- The **0-12 month** customer group has the highest churn rate among the tenure groups.

Contract Type

- Month-to-month customers have a substantially higher observed churn rate than customers on longer contracts.
- Longer-contract customers show lower observed churn rates in this dataset.

Customer Lifetime

- Churned customers have a shorter average observed tenure than retained customers.
- This suggests that the early customer lifecycle is an important area to investigate for retention efforts.

Support Services

- Customers with Tech Support show a different observed churn rate from customers without Tech Support.
- Customers with Online Security also show a different observed churn rate from customers without the service.
